[Scope of the Claim]

[Claim 1]

Label adhesive comprising (A) one or more types of emulsion selected from ethylene-vinyl ester copolymer emulsion and poly (meth)acrylic acid ester group emulsion and (B) a substance that is water insoluble, and which is alkaline soluble or alkaline swellable.

[0013]

As an acid-type highly water-absorbable resin, highly water-absorbable resins or the like can be listed such as highly water-absorbable resins in which a dealkalization process (e.g., cleansing process by acid) is performed, and highly water-absorbable resins which are fabricated using (meth)acrylic acid chloride or (meth)acrylic acid and using a common cross-linking agent. These are mostly undissolved and unswelled in normal water and exist as powder, but become significantly swelled in an alkaline aqueous solution. As specific examples of highly water-absorbable resins, a cross-linking substance of poly acrylic acid chloride, a cross-linking substance of salt of  $\alpha$ -olefin-maleic acid anhydride copolymer, a cross-linking substance of acrylic acid/starch graft polymer, a hydrolyzed substance of starch-acrylonitrile graft copolymer, or the like can be listed.
